Quaestio medica Quodlibetaria disputationibus agitanda In Scholis Medicorum, die Jouis 13a Nouembris.

Doctiss. viro D. Joanne Martino D. M. Moderatore prudentissimo.

Estne Connata moriendi Necessitas?

Vniuersi opifex natura mundum hunc aeternum, et corpore duplici Architectata, caelesti et Elementari: Illud in se sua [illegible] perpetua constantique circulatione volubile diuinis animatum Informatumque mentibus, et liberum et solutum ab omni concretione mortali, esse voluit: Ita hoc materiae Informis [illegible] Infinitaque sordibus Immersum, quasi eluuione aspersum [illegible] mutationibus variis Impulsum et fluitans, omnibus morbis [illegible], omnibus Interitus causis tum Intestinis, tum externis exposuit.

Elementa siquidem et quatuor et contraria, et affectioni ~~[illegible]~~ subiecta, tum Insita natiuaque sibi grauitate, tum vicinae contagio humi-[illegible] et grauitate, orbium Insuper caelestium homini fini suo [illegible] continuandoque [illegible] rotatione, et [illegible], [illegible] [illegible] ultro citroque commeantia, et in centrum mundi, locum naturae suae contrarium [illegible], rarefactione, condensatione, diuisione, et [illegible] ad minima appositione, alternis denique assiduis reciproca qualitatum actione passioneque sic fracta et debilitata, ut nec viuis, nec substantiae formas [illegible] [illegible] incolumes, sed [illegible] [illegible] [illegible], mole proportionatas, et nobilioris formae famulitio [illegible] vinctas, corpus mixtum [illegible] [illegible], ac sibi undique simile conflant. hinc fit ut a contrariis causis discordiae [illegible] [illegible] excitantibus prompte dissoluta, mixtionis ergastulo, ac compede liberata in priores naturalesque sedes Lata [illegible] nostri compage ~~dissoluta~~ dissuta.

Horum mixtis materiam praebentium confusa moles bruta iaceret, nisi caloris Insiti, diuinius quid supra Elementi Ignis rudiorem naturam spirantis lumine accenderet hic seminis et sanguinis paruo suscitabulo [illegible], mox alimenti sanguinis et spirituosi in cordis sinistro sinu [illegible] fornace [illegible], [illegible] [illegible] [illegible], humido primigenio [illegible], diuinitatis radiis mouibunda membra [illegible], summa, ima, media principiorum alioqui fauore [illegible] [illegible], facultatum omnium [illegible] [illegible] et commune Instrumentum. In quo operatur, dum nimium gaudet, [illegible] [illegible], humidi contubernio [illegible], [illegible] [illegible] caeteris partium solidarum [illegible] additum, [illegible] [illegible] [illegible]. Cuius dum pabulum quaerit [illegible], continua in [illegible] contumaciaque materiam actione alteratur, quam sui humidique Interitum non Intelligit quasi aliud agens conficit.

Socia cum Illis arma [illegible] [illegible] naturalium [illegible] [illegible] [illegible], hostilia in [illegible] [illegible]. [illegible] [illegible], cordis, arteriarumque [illegible] [illegible] [illegible], [illegible] [illegible], calor Insitus aut [illegible] [illegible] [illegible], aut Igni plusquam [illegible] mobilis [illegible]. [illegible] calor sub alto pectore habitans dum humidi primigenii [illegible] [illegible], [illegible] [illegible] corporis nostri substantiam prompte absorberet, nisi debilitae [illegible] familiaris lacuna [illegible] [illegible] cibi et potus accessione [illegible]. [illegible] ad [illegible] suppressione sordido [illegible] [illegible] ministerio [illegible]: [illegible] [illegible] [illegible] inutili sarcina liberamur. Somno [illegible] toto corpore spiritus ad signa sua [illegible] fontes [illegible]: vigiliis [illegible] ciborum aequabili distributione membra [illegible]: motu ~~[illegible]~~ [illegible] [illegible] calor colligitur. [illegible] animi perturbationibus motus suos obit, a centro ad circumferentiam progreditur, a circumferentia ad centrum regreditur, [illegible].

Offensus [illegible] naturam nostram corrumpit [illegible] qualitatum Immoderatione, [illegible] substantiae vitio. cibi [illegible] [illegible], [illegible] in [illegible] [illegible], [illegible] [illegible] [illegible] materia [illegible] tota substantia. [illegible] [illegible] [illegible] culina [illegible], caput vaporibus Implet, opacam [illegible] in totum corpus [illegible]. [illegible] [illegible] [illegible] profluentia vires facultatesque dissoluunt, Somni profundioris caloris compressione, [illegible] nubilo spiritus facultatesque Inuoluunt vigiliae, [illegible] prodiga ~~[illegible]~~ [illegible] [illegible] caloris siccitatisque stimulos admouent. [illegible] motus, tum naturalis, tum voluntarius humorem colliquat calorem dissipat. Sedentaria [illegible] quandam [illegible] addit corpori, tantum diuinae nostri aurae detrahit. Animi perturbationes dum caloris sibi tanquam ~~[illegible]~~ rapido flumini obsequentis nunc Implicant, nunc Explicant, Ipsum aliae [illegible], aliae ~~[illegible]~~ suffocant. Ab his denique omnibus morborum in vitam [illegible] proficiscentis natura, et suscipientis conditione.

Est Igitur Connata Moriendi necessitas.

Ponebat Joannes hautin Lutetianus. 1572.
